

15 April 2026

Today Work

1. Problem Summary (Before Fix)

Issues reported:

- Service report created but not retrievable (GET failed)
- Cash flow transactions:
 - Personal data → working correctly
 - Business data → created successfully but NOT retrieved
- Accounts:
 - Business accounts not appearing in GET API
- Transactions:
 - Create working
 - GET failing
 - DELETE failing
- SQL error in Drizzle query:

where ("cash_flow_transactions"."tenant_id" = \$1 and = \$2 ...)

→ missing column condition causing query break

- Final issue after fixes:
 - Total balance calculation incorrect

2. Root Cause Analysis

A. Broken dynamic WHERE condition (MAIN ERROR)

- In getCashFlowTransactionsByMode
- Conditional query was overwritten incorrectly

- One condition missing field name → generated invalid SQL

Result:

- Business transactions query failed
 - GET API returned empty or error
-

B. Multiple .where() overwrites in Drizzle

- .where() used multiple times in same query
- Previous conditions were replaced

Result:

- Filters for business mode did not apply correctly
-

C. Business account access logic issue

- Shared accounts query incomplete join condition
- Missing proper exists() validation in some flows

Result:

- Accounts created but not visible in GET
-

D. Transaction delete & update issue

- Ledger not fully rebuilt after delete/update
- Only partial account recalculation done

Result:

- Transaction removal not reflected in UI
-

E. Balance calculation mismatch (FINAL ISSUE)

- bankAccounts.currentBalance used for totals
- But ledger (runningBalance) used for transactions

Result:

- Total balance mismatch even though ledger is correct
-

3. Fixes Implemented

FIX 1: Corrected Drizzle WHERE condition building

- Replaced multiple .where() calls with single and(...)
 - Fixed missing field condition causing:and = \$2 error
-

FIX 2: Business account retrieval fixed

- Added proper:
 - bankAccounts.section = 'business'
 - exists(bankAccountShares...)
 - owner + shared access logic
-

FIX 3: Transaction GET fixed

- Correct join between:
 - cashFlowTransactions
 - bankAccounts
 - Proper mode filtering added
-

FIX 4: DELETE + UPDATE fixed

- After delete:
 - Ledger fully rebuilt using ordered transactions
 - Ensured runningBalance recalculation for all rows
-

FIX 5: CREATE transaction fixed

- Clean cents handling
- Correct previous balance logic
- Bank account balance update retained

FIX 6 (NEW ROOT FIX): TOTAL BALANCE corrected**Before:**

SUM(bankAccounts.currentBalance)

After:

SUM(last runningBalance of each account)

- ✓ Now total is derived from ledger
- ✓ No cache dependency
- ✓ No drift issue

4. Final System Behavior (After Fix)**Personal Mode**

- Accounts → working
- Transactions → working
- Balance → correct

Business Mode

- Accounts → now fixed (GET working)
- Transactions → create + get + delete working
- Balance → corrected after ledger fix
